

# PORUS

# ONE

I'd like to buy Porus® One for my cat. It's a product for cats' kidneys.

## What is Porus® One?

Porus® One is a selective adsorber. It takes up large quantities of uraemic toxin precursors in the gut and ensures that they are eliminated naturally with the faeces.

Uraemic toxin precursors are produced in the gut from the decomposition of proteins by gut bacteria. The precursors then travel to the liver where they are converted into actual uraemic toxins and have to be excreted via the kidneys (detoxification). Porus® One binds the precursors of these toxins in the intestine and is then excreted with the faeces. The total quantity of precursors bound and subsequently excreted by Porus® One can't anymore be transformed into uraemic toxins like indoxyl sulfate or p-cresyl sulfate. Binding these precursors of uraemic toxins supports the kidney health.

## Easy to use

Porus® One should be sprinkled onto the cat's food once daily and mixed in well. It is odourless and tasteless so it is well tolerated by the cat.
